the **COMPANY**

Founded in 1995, GlobalNet Services, Inc. (GNSI) is a fast-growing, award-winning information technology firm. GNSI has made a name for itself as a premier provider of Web-Application Development, Systems Integration, Enterprise Search Solutions, and Business Intelligence Solutions. GNSI is a Capability Maturity Model Integration (CMMI®) Level 2 company for Software and Systems Engineering. The prestigious CMMI® designation validates GNSI's commitment to establishing and implementing effective processes that enable the development and delivery of quality software and systems products on time and within budget.

GNSI has performed work with some of the most highly recognized organizations in the country, including the U.S. Food and Drug Administration, National Institutes of Health, Delta Faucet Company, Navy Federal Credit Union, Iron Mountain, and New York Life Insurance Company.

GNSI has won several awards including the Washington Technology Fast 50 Award, was recognized as a partner in the "Top 5" Excellence in Government Award winners for 2005, and received multiple recognition awards from the U.S. Food and Drug Administration.

CLIENTS

GNSI's clients cover the spectrum from small local businesses to worldwide corporations to federal agencies. A partial list of our clients, known for their commitment to quality and outstanding customer service, is included here. GNSI shares these traits with its clients resulting in well-managed projects tailored specifically to each client's needs.

CONTRACTS

GNSI's GSA Schedule number is: **GS-35F0241-L**.

GNSI has been awarded a contract by the General Services Administration (GSA) to provide professional information technology services to Federal and State and Local Government agencies under a Federal Supply Services contract. Under this contract, GNSI can offer a broad array of information technology services. Specific services include program management, requirements analysis and design, systems integration, application development, database administration and maintenance, system maintenance support and training.

PARTNERS

To be successful and provide clients with the best solutions possible, we have developed alliances with industry leaders that are up to our standards of excellence. With access to each company's partner resources, we are able to provide our clients the latest in technical expertise.

As a Google Enterprise Professional Program partner, GNSI provides Google solutions to commercial and government organizations. These solutions include the installation, maintenance, support and training for the Google Search Appliance, Google Minis, and Google Maps development.

GNSI has actively implemented Google solutions since 2000 through the Google Hosted Search Solution, and was one of the first companies to implement the Google Search Appliance. One of our current implementations is for the U.S. Food and Drug Administration (FDA).

Please visit www.google.com/enterprise/gsa/fda.html for more information.

GNSI is a Certified Microsoft Partner and has over ten years of experience working with Microsoft Server and Desktop products.

Our Microsoft expertise includes:

- Windows Server and Desktop deployments
- Microsoft Business Intelligence Solutions
- .NET development and MS-Office Smart Document solutions
- SharePoint implementations
- SQL/Server Database Administration and Development
- Internet Information Server (IIS) expertise

For almost 30 years, Oracle has been helping customers manage their business systems and information with reliable, secure, and integrated technologies. GNSI is an Oracle Partner with expertise and certified staff in Oracle Database, Oracle Application Server, and the Oracle Universal Content Management System.

GNSI is a SAP Business Objects Partner and provides consulting services for the design, development, and maintenance of Business Intelligence solutions. SAP Business Objects offers a broad portfolio of tools and applications designed to help you optimize business performance by connecting people, information, and businesses across business networks.

Using IBM Cognos products, GNSI provides products, services, and technology expertise that help our clients improve and direct corporate performance. IBM Cognos offers a single software suite that supports all components of performance management – from planning and budgeting to measuring and monitoring performance to reporting and analysis.

GNSI is a Citrix Gold Partner that has been consulting, installing and supporting Citrix server based applications and hardware since 1996 and has a proven track record to help your organization deploy Citrix solutions in any environment. With Citrix solutions, organizations across all industries can leverage new business opportunities and gain a competitive advantage by using Citrix application delivery infrastructure to deliver optimal application performance and information security to their users in all scenarios, at lower operating costs.

GNSI is a Strategic Rackspace partner delivering managed hosting solutions for commercial and government organizations. Rackspace is the world's leader in hosting serving more than 31,000 customers in eight data centers worldwide.

GNSI is a premier member of the Adobe Solution Partner Program and has specialized in the development of ColdFusion applications since 1995, the year ColdFusion was released. As a premier partner, GNSI enjoys a close relationship with Adobe that leads to a direct impact on providing industry-leading solutions to our clients.

CAPABILITIES

At GNSI, we work with our clients to define, develop and implement the solutions they need to achieve their business objectives. Whether it is a knowledge management system, a universal search solution, or a business intelligence implementation, GNSI delivers an innovative solution that is on-time and within budget.

We do this by:

- Performing in-depth requirements analysis
- Creating user-centric design solutions
- Applying advanced technology concepts
- Ensuring ease of administration and maintenance

WEB APPLICATION DEVELOPMENT

Building Custom Web-based Applications That Solve Unique Business Challenges.

GlobalNet Services, Inc. (GNSI) was founded on crafting custom web-based applications that solve unique business challenges. Our team of software analysts and engineers are experts in business process and enterprise application architectures using **Capability Maturity Model Integration (CMMI®)** certified processes and procedures. GNSI's interactive design team members are usability experts in application interfaces. They collaborate seamlessly with our software engineers to create attractive and efficient user experiences. GNSI's integrated approach ensures that the end result is delivered on time and on budget.

GNSI software engineers use a software development life cycle based on the Rational Unified Process (RUP) to efficiently meet project objectives including low total cost of ownership.

GNSI collaborates with your organization to define, design, develop and deploy your custom application. Whether you are interested in a single sign-on (SSO) application that integrates disparate systems or upgrading an existing legacy system, GNSI will rapidly deliver a tailored software solution to meet your organization's business needs.

Our Expertise Includes:

- Java and J2EE Programming (JMS, JDBC, JNDI, Java Servlets, JSP, EJB, JSSE)
- XML and XSLT Development
- Web Services Development (UDDI, WSDL, SOAP)
- Microsoft .Net Development
- Database Administration (Oracle, Microsoft SQL/Server, MySQL)
- Oracle Application Server/Portal
- Oracle Content Management Solutions
- Microsoft SharePoint Server Solutions
- Adobe ColdFusion Programming
- Google Maps Development

Success in Today's Market is Often Determined by How Smoothly an Organization Makes the Transition into a New Business Model.

GlobalNet Services, Inc. (GNSI) has extensive experience in building and integrating mission-driven government and commercial systems. More than ever before, organizations are consolidating business processes and technology components to integrate closely with their customers, suppliers, and partners. Success in today's market is often determined by how smoothly an organization makes the transition into this new business model. GNSI has extensive experience in delivering the systems integration solution that is best for your organization.

Managed Hosting Implementation Services

GNSI has extensive experience designing and developing cost-effective hosting solutions that provide our clients with a combination of performance, scalability, and availability. GNSI is skilled at identifying the most appropriate n-tier architecture to support each client's distributed computing needs. GNSI has worked with major organizations to develop and implement hosting solutions for each organization's Internet, intranet, or extranet environment.

These services include:

- Strategic Planning and Architecture Design
- Procurement Services for Hardware and Software Licensing
- Application Development and Maintenance
- Infrastructure Managed Operations Services
- Migration Services From Current Hosting Company
- Web Caching Services and Support Through Akamai's EdgeSuite Enterprise Services
- Cloud Computing Implementation
- Information Security Services

System Design and Support Services

Understanding a client's business objectives, assessing their current environment, and planning and implementing technology selected to address their needs is an integral part of any information technology process. Extensive and detailed planning and preparation are critical to the physical design and implementation of an effective infrastructure.

Integration of computer systems, database environments, and network configurations along with a host of other issues require significant expertise. With nearly 15 years of experience, GNSI brings the knowledge and expertise required to solve complex issues surrounding systems integration. GNSI works with a solutions oriented approach to provide clients with results, not simply technologies. From initial system design, GNSI focuses on long-term systems, network and

database requirements, identifies industries solutions that provide scalability, and works to implement technologies within the framework of the existing environments.

Our expertise includes:

- Microsoft Certified Systems Engineer (MCSE) resources for:
 - Windows Server 2003
 - Active Directory
 - Domain Design/Replication
 - Internet Information Server
 - Exchange Implementation and Clustering
 - Internet Security & Acceleration (ISA) Server
- Red Hat Certified Engineer (RHCE) resources for installation, configuration, troubleshooting and system maintenance
- VMware Certified Professional (VCP) resources for installation and administration of virtual environments
- MS Office SharePoint Server 2007 (MOSS) installation and administration
- MS SQL/Server 2005/2008 database administration and development
- Oracle Certified Professional (OCP) resources for Oracle Database installation and administration including Real Application Cluster (RAC)

Access Solutions

GNSI, a Citrix Gold Partner, provides secure, on-demand access to any network business application, program or resource whether the user is internal, remote or mobile. GNSI can provide access solutions to small, medium and large organizations across all industries.

Our services include:

- Consulting: analysis, design, test and rollout
- LAN, WAN, mobile Proof of Concept (POC)
- Management, support and maintenance
- Cross-platform access solutions – Windows & Unix
- Desktop and server virtualization
- Onsite or virtual training from certified professionals
- Secure access implementations
- Migration from Citrix Metaframe to XenApp
- Disaster recovery and rapid recovery
- Single Sign-On (SSO) solutions

Security

GNSI has successfully developed and maintained secure systems for its customers. GNSI applies its security knowledge to ensure that the systems we deliver and maintain protect the information stored and processed against external and internal threats. This is accomplished through our in-depth understanding of security concerns and Federal law, policy, and regulation that establish requirements for protecting information and information systems (e.g., Federal Information Security Management Act (FISMA), Health Insurance Portability and Accountability Act (HIPAA), Privacy Act). GNSI also applies risk analysis, cost benefit analyses, and knowledge of the customer business environment to implement cost effective security controls that comply with statutory requirements.

GNSI provides support in analyzing information systems to complete security Certification and Accreditation (C&A). This C&A support can include all aspects of the C&A process (e.g., development of the security plan, risk assessment security test and evaluation, contingency planning, preparation of a plan of action and milestones) and is tailored to address organization-specific requirements and procedures.

ENTERPRISE SEARCH

Increase Your Organization's Productivity With Google Universal Search.

GNSI is a certified Google Enterprise Professional partner and has been implementing Google Search solutions since the year 2000. We utilize our extensive experience in search optimization and clustering, security, and personalization to provide search solutions for structured and unstructured data and combine search results from disparate sources.

GNSI offers complete web consulting and integration services to extend the power of the Google Search Appliance and Google Mini; the same quality search as Google.com to your websites, intranets, extranets, and portals. Read about GNSI's success with the U.S. Food and Drug Administration's Google Search implementation at <http://www.google.com/enterprise/gsa/fda.html>.

GNSI's Google consultants have been trained extensively on Google's products and are experts in the installation, configuration and maintenance of the Google Search Appliance and Google Mini. GNSI will work with your organization to understand your business requirements and develop the optimal search solution utilizing your home-grown, proprietary, and other legacy data sources.

GNSI can expertly configure and implement Google search with your existing portals, content management systems, and databases to create a great user experience with faster and more relevant search results.

BUSINESS INTELLIGENCE

Architecture, Design, and Implementation of Business Intelligence Solutions.

Our business intelligence services focus on helping clients collect and analyze external and internal data to generate value for their organization. GNSI brings together a deep understanding of the business and technology dimensions of an organization to harness information to improve decision-making, financial management, regulatory compliance, and customer service.

Our suite of performance management, data warehousing, data mining, and information analytics services measure, analyze, and optimize business performance across the entire enterprise. Business intelligence can help organizations transform data into knowledge and achieve higher levels of performance by:

- Providing insights that can help pinpoint new revenue-generating opportunities and improve operational efficiencies and visibility across the organization.
- Optimizing the return on existing business and IT investments such as data management, data mining, customer intelligence, customer relationship management, and enterprise resource planning technology.
- Achieving greater compliance with government and regulatory guidelines.
- Enabling faster problem solving and decision making at the strategic, operational, and tactical levels by internal and external users.

GNSI provides consulting services for the architecture, design, and implementation of Business Intelligence solutions. GNSI works with organizations in developing enterprise solutions that provide timely and secure information.

GNSI has developed Business Intelligence on an enterprise-wide basis, providing strategy, education, architecture, and integrating training and development for:

- Performance Management
- Enterprise Reporting
- Data Warehouse/Data Marts
- Online Analytical Processing (OLAP)
- Data Exchange and Transformation
